ABSTRACT OF THE DISCLOSURE

A method for forming an image, which comprises subjecting a photosensitive layer of a photosensitive lithographic printing plate having a photosensitive layer comprising a photopolymerizable composition formed on a support surface to scanning exposure with a laser light having a wavelength in a range of from 650 to 1,300 nm, developing an image, and then further subjecting the photosensitive lithographic printing plate having the developed image to whole image exposure with a light exposure energy of from 1 to 70 times larger than the light exposure energy at the time of the laser light scanning exposure.
